The image features a silhouette of a person with long hair, seen from the side, holding an open book. They are positioned against a warm, orange-hued background that suggests a sunset or sunrise. A large, bright sun is visible in the lower right corner. Two birds are shown in flight in the upper left portion of the frame. The overall mood is peaceful and contemplative.

La cerradura

En el momento en que el hombre sintió la necesidad de proteger una propiedad, ideó un objeto que le ayudara a evitar que accedieran a ella.

Proklamarea-*te*, la primă
introducere *tu* — un *de*
măcar *que* subiectul
de la începutul de un
paragraf și se așteaptă de
altă feluri a la *tu*.

● CERRADURA
EGIPCIA

En Italia existe una localidad, San Benedetto in Poggio, en la que, hasta el siglo xii, los cerrojos de muchos castros confusión con un CATE-
JOJO DE MADRERA Y UN ANCIANO DE
DE PASCALLO. Se cree que este re-
cuerda un al que se utilizaba en la
cerrojos de madera del siglo xii al

ANTIGUAS LLAVES Y CERRADURAS

Las cerraduras de madera ya se conocían en Mesopotamia en torno al 2000 a.C. En Egipto se usaba un mecanismo de cierre con pestillo de madera deslizante, accionado por una llave dentada que levantaba los clavos que impedían el acceso. La Biblia habla del empleo de llaves y Homero alude directamente a llaves de bronce.

11. **BRIDGE DESIGN** 331

● LAS LLAVES DE DEDO

En Roma un artesano especializado fabricaba pequeñas llaves en bronce fundido con un anillo para llevarlo en el dedo porque los togas no tenían bolsillos. Las anillas-llave, usadas para cerrar puertas papales, eran consideradas un símbolo de estatus. Al IV dC, el emperador publicaba la posesión de objetos valiosos.

► HISTORIA DE LA CIENCIA Y LA TECNOLOGÍA

Energía elástica
y de torsión

En la antigua Grecia la artillería experimentó un rápido progreso cuando aparecieron las armas de lanzamiento.

Las máquinas de lanzamiento griegas alcanzaron dimensiones y potencias nunca antes igualadas. Podían disparar flechas de hasta 4 kilos (1,35 m) y proyectiles de piedra de hasta 30 kilos (78 lb) a distancias de entre 200 y 250 m.

LA CATAPULTA

Este invento griego fue muy utilizado en la antigüedad. A diferencia de la ballesta, que evolucionó a partir del arco, esta arma se basaba en un principio nuevo: la elasticidad de torsión.

FLECHAS Y PIEDRAS

Los primeros ejemplares de catapultas de torsión utilizadas para lanzar flechas se remontan al asedio de Perinto por parte del ejército macedonio de Filipo II, en el año 340 a.C. Ocho años después, Alejandro Magno usó unas que lanzaban proyectiles de piedra durante el largo asedio a la ciudad de Tiro, en Fenicia, y más tarde en Gaza.

SE PREPARA LA SALIDA
PARA LAS TRES GRANDES

PROYECTILES EN PIEDRA DE FORMA VARIADA

CAUTION

POTENCIA DE LAS NUEVAS ARMAS DE TIRO

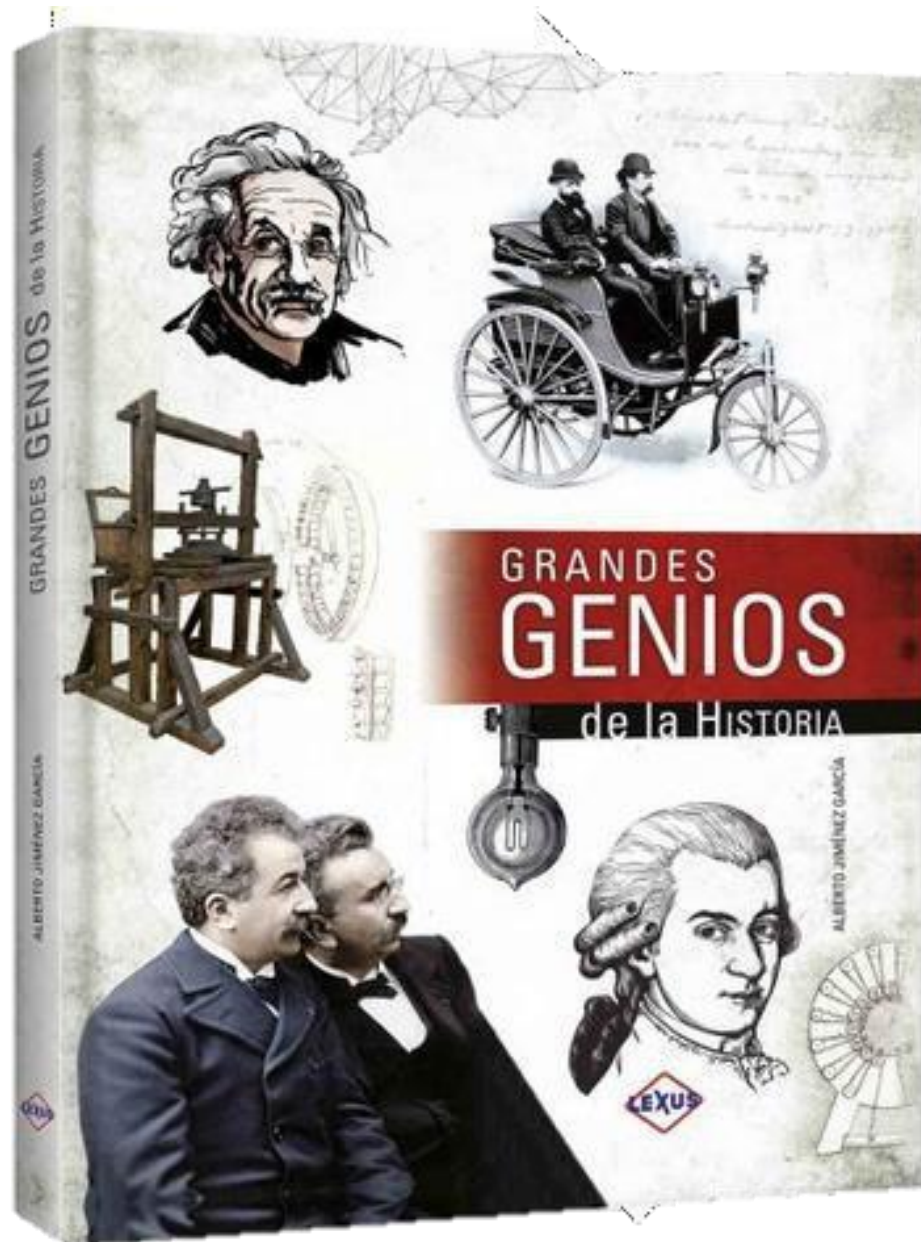

La eficacia de las armas de torsión queda confirmada por el hecho de que, a partir de su aparición, cambió radicalmente la técnica de construcción de las fortificaciones, al igual que sucedió en Europa cuando se empezaron a utilizar los primeros cañones en los asedios.

Para calibrar una catapulta de torsión había que efectuar muchos cálculos, incluyendo raíces cúbicas. Para esto Eratóstenes creó el *medilabio*.

● TECNOLOGÍA PERDIDA

La tecnología de los catapultas griegas se perdió. FUE RECUPERADA POR EL GENERAL ALEMÁN ERWIN SCHIRAMM, que, en 1904, estudió a fondo la *Bellepoeica*, el tratado de mecánica de Filón de Bizancia (280-225 a.C. aprox.).

\$21.000

Nicolás Copérnico

ASTRÓNOMO REVOLUCIONARIO

EXISTE UN ANTES Y UN DESPUÉS DE NICOLÁS COPÉRNICO (1473-1543) EN LA HISTORIA DEL PENSAMIENTO CIENTÍFICO Y HUMANÍSTICO.

NO ES PARA MENOS: EL INSTAURÓ PARA SIEMPRE EL CONCEPTO DE HELIOCENTRISMO, DESPLAZANDO A LA TIERRA DEL CENTRO DE TODAS LAS COSAS. FUE EL EMPUJÓN QUE NACERÍA EL MOVIMIENTO RENACENTISTA PARA QUE EL HOMBRE FUERA LA MEDIDA DE TODAS LAS COSAS, DEBÍA RECONOCER QUE NO TODO GIRAABA EN TORNO A EL.

POR SUPUESTO, GRAN PARTE DE LA IGLESIA RECHAZÓ SUS IDEAS, PERO COPÉRNICO SE RESERVÓ PUBLICARLAS JUSTO ANTES DE SU MUERTE.

UNA FORMACIÓN GLOBAL
Aunque de ascendencia alemana, Mikołaj Kopernik (en polaco), nació en Toruń, Polonia, dentro del Reino de Polonia, en 1473. Su padre, comerciante, falleció cuando tenía 10 años, y su educación quedó a cargo de su tío materno, un importante obispo de Polonia. Estudió en la Universidad de Cracovia y

posteriormente, viajó a Italia, donde se inscribió en la Universidad de Bolonia. Allí tuvo una estrecha relación con su profesor Domenico Maria Novara, estudioso de la teoría geocéntrica de Claudio Ptolomeo, que imperaba desde el siglo II. Sus estudios incluyeron Derecho, Medicina, Griego y Filosofía, y hacia 1500 se especializó en ciencias y astronomía en Roma.

A lo largo de su vida, Copérnico trabajó como matemático, físico, astrónomo, jurista, canónigo, gobernador, diplomático y economista. Aunque su aportación a la astronomía resultó monumental, esta era poco menos que la mayor de sus aficiones. Su vida profesional transcurrió como sacerdote y médico, principalmente. Incluso realizó alguna aportación notable a la teoría económica, como la «teoría de la cantidad de dinero» que establece que los precios suben si circula mucho dinero en la sociedad. Todo un antecedente del término «inflación», que todavía no había sido inventado.

ANTECEDENTES ASTRONÓMICOS
Para Copérnico fue clave aprender griego en su etapa en Bolonia. Gracias a ello, pudo leer directamente a Aristóteles y Ptolomeo, dos «geocéntricos» convencidos. Pero, probablemente, también entró en contacto con Aristarco de Samos (c. 310 a. C.-c. 230 a. C.), quien fue el primero en formular la idea de un universo heliocéntrico. Este se atrevió a llevar la contraria a la Teoría geocéntrica de Aristóteles, que dominó a fondo más tarde por Ptolomeo. Quizá por eso, por llevar la contraria a la tesis oficial (ver «reflejo de Sennheiser», página 78), su nombre y teorías quedaron olvidadas durante nada menos que 17 siglos (más incluso que la «larga noche» que supuso la

GIROS Y PRINCIPIOS COPERNICANOS

La relevancia de Copérnico ha calado en nuestro vocabulario habitual, «Ley» en el de los expertos. Por ejemplo, la expresión «revolución» «giro copernicano», empleada para describir algo que ha sufrido un cambio radical, llega de mano de Immanuel Kant en el prólogo de *Crítica de la razón pura*, iniciándolo en que era necesario que la Metafísica cambiara su visión. Asimismo, en cosmología física, el llamado «principio de Copérnico» afirma que la Tierra no ocupa una posición central en el universo. Esto enlaza con el concepto relativista que postula que no somos observadores privilegiados del universo, y que nos lleva de la mano a aceptar que el universo no fue creado para nosotros... por lo que no solo debe existir vida en este planeta.

Estadística de la ciudad de Toruń.

Stephen Hawking

LA LUZ SOBRE LOS AGUJEROS NEGROS

A MENUDO, LA FÍSICA SE ADIERTA EN CAMINOS NECESARIAMENTE COMPLICADOS, QUE NOS DEJAN ORILLADOS AL COMÚN DE LOS MORTALES. PERO, MUY DE CUANDO EN CUANDO, APARECEN CIENTÍFICOS COMO STEPHEN HAWKING (1918-2018), CAPACES DE RENOVACIONES Y SUPLEN CON SU CAPACIDAD NUESTRAS LIMITACIONES. LA INVESTIGACIÓN FUE UNO DE LOS GRANDES FUERTES DE ESTE BRITÁNICO QUE APORTÓ TEOÍAS MUY SÓLIDAS SOBRE EL ORIGEN DEL UNIVERSO Y SE ACOMÓ

«VIRTUALMENTE» MÁS QUE NADIE AL INTERIOR DE LOS AGUJEROS NEGROS. SI EINSTEIN FUE EL ROSTRO DE LA CIENCIA DURANTE LA PRIMERA MITAD DEL SIGLO XX, HAWKING SE CONVIRTió EN SU HEREDERO MÁS UNIVERSAL.

UNA VIDA ASOCIADA AL RIESGO
La biografía de Stephen Hawking no se explica sin su firme resistencia a la esclerosis lateral amiotrófica (ELA). Pero antes, tanto él como su familia sortearon otro posible destino: Stephen nació en Oxford en 1942, durante la Segunda Guerra Mundial. Allí se

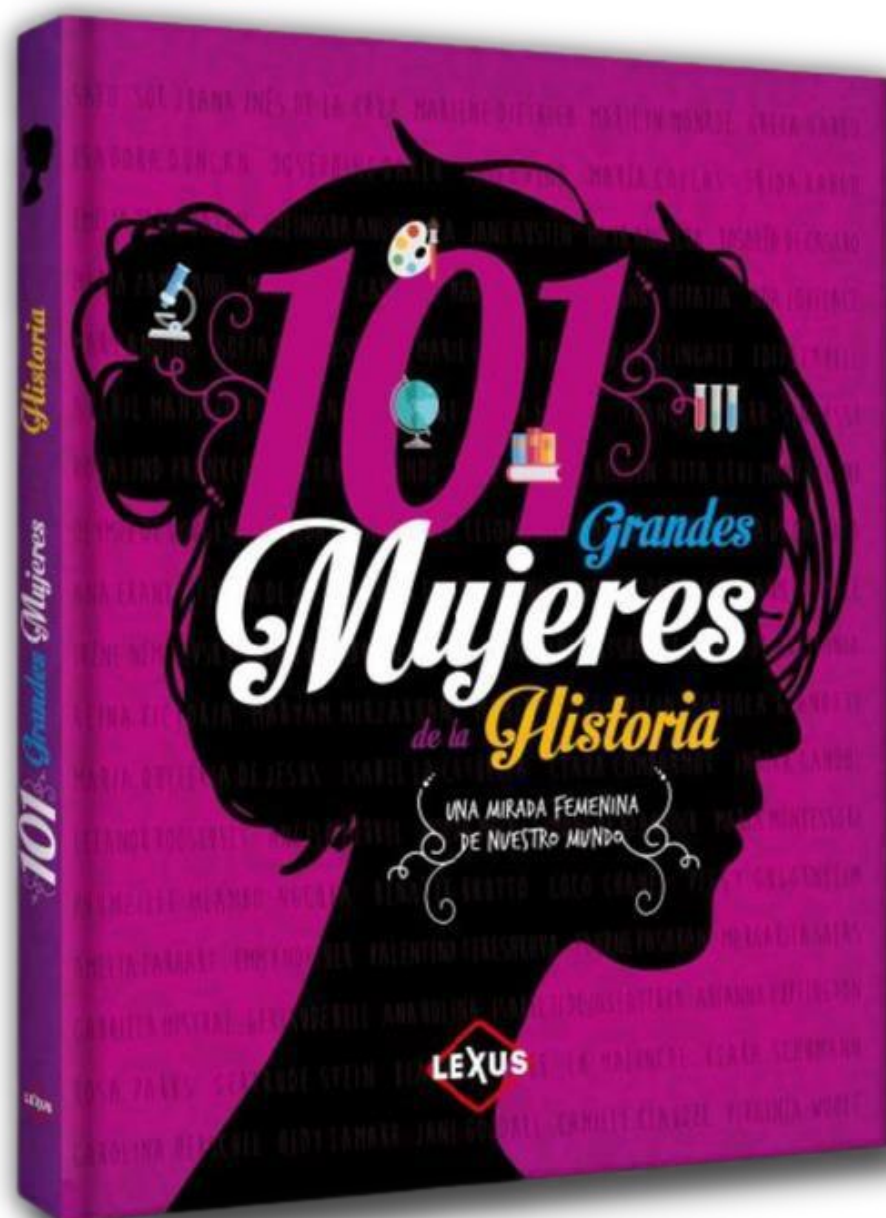

había mudado su familia desde Londres, de donde eran originarios, después de que, meses antes, uno de aquellos cohetes V2 alemanes explotase a pocos metros de la residencia familiar. El rey de los agujeros negros se salvó por poco de morir —o no llegar a nacer— debido a otro tipo de agujero, causado por el talento de otro físico como Werner von Braun, diseñador de esas bombas.

El joven Hawking estudió Física en el University College de Oxford, si bien en varias ocasiones demostró allí su brillantez (y quizá precisamente por eso), la vida universitaria se le hizo aburrida. Se doctoró en Cambridge, con trabajos sobre cosmología y la teoría general de la relatividad.

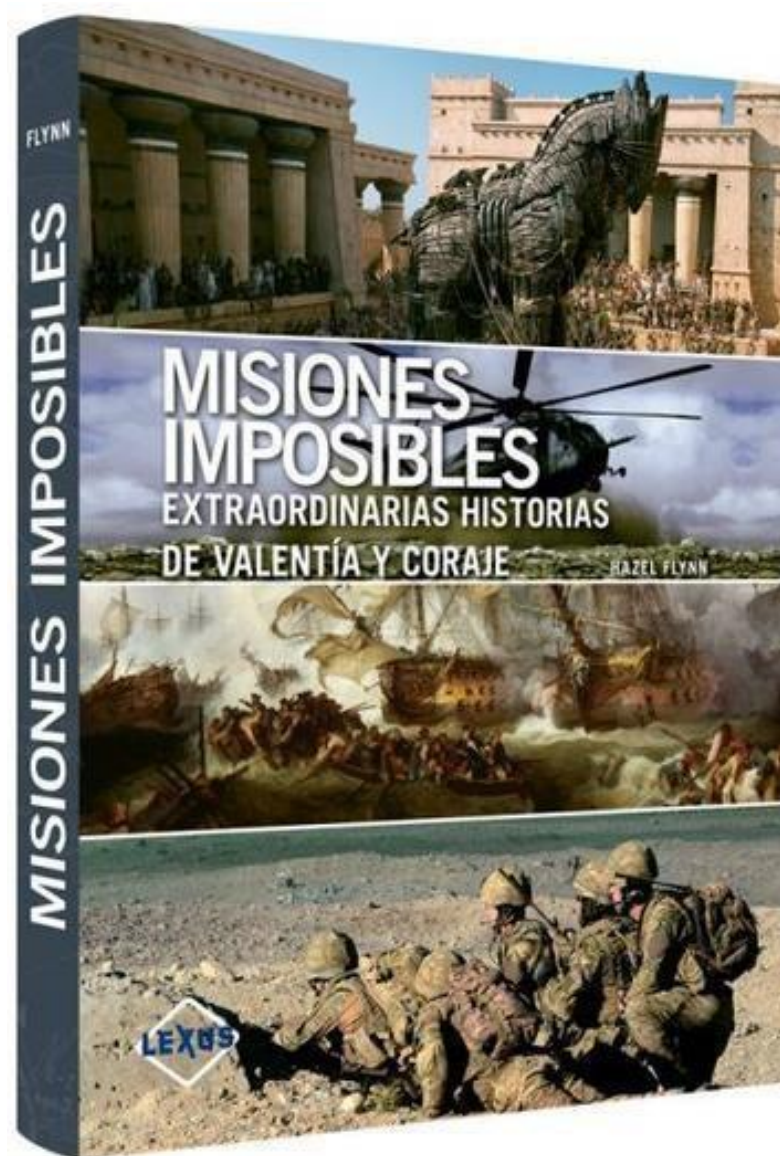

LOS AGUJEROS NEGROS Y LA RADIACIÓN
Desde entonces, edificó la mayoría de sus investigaciones hacia el qué y el porqué de los agujeros negros —

UNA BREVE (O LARGA) HISTORIA DE SUPERACIÓN

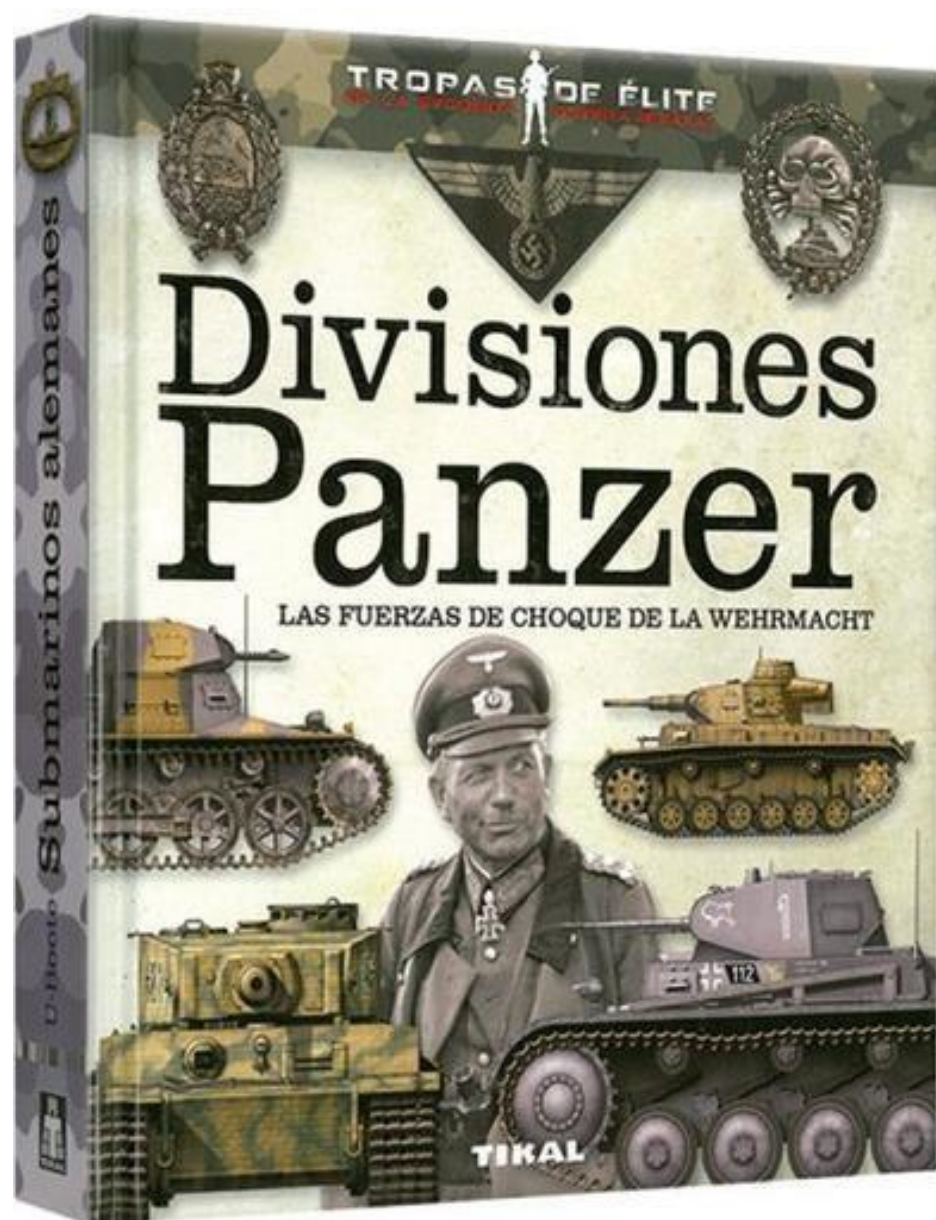

En 1963, mientras patinaba, Stephen Hawking cayó y no pudo levantarse: su cuerpo no respondía bien a los mandatos de su mente. Al poco, le diagnosticaron una enfermedad degenerativa neuromuscular; los médicos le anunciaron que su esperanza de vida no iba más allá de dos años. Falleció 55 años después, siendo el enfermo de ELA que más tiempo ha sobrevivido. Conseguió llevar una vida «casi» normal, tanto como para casarse dos veces —y divorciarse otras tantas— y tener tres hijos. La enfermedad le fue afectando cada vez más, y solo podía mover algunas partes de su cuerpo. Con la lectura de sus propias, un ordenador interpretaba frases que ejecutaba un sintetizador de voz; Hawking le tomó tanto cariño a ese tono algo robótico que nunca lo quiso cambiar, pese a los avances. El impulso de su mente privilegiada fue sin duda mayor que la gravedad de su dolencia; su sentido del humor, su mejor colchón. Él nos enseñó que se podía escapar de un agujero negro y, también, de un destino oscuro.
